**RELIABLE
TESTING**

EASY

The **CALATI** **300AST** Alberto Leather Softness Tester

is a means of determining the softness of leather without defacing the hide or skin, and doesn't require samples to be cut from leather prior to testing.

This ISO17235 test, enables a quality system to be set-up between supplier and customer whenever leather softness is required.

Designed by **Calati** in cooperation with **DANESE** who is actually sole distributor, it brings easyness, fastness

and reliability to a test that before was a little bit tricky to be completed.

The **300AST** is a Digital Leather Softness Tester that will soon features a Bluetooth interface enabling to be seen everywhere in the customer network.

Softness tester to determine the degree of softness of leather and other similar fabrics (synthetic leather, non-woven fabric, etc.), according to the international standards IULTCS/ IUP 136 equivalent to UNI EN ISO 17235.
